<https://github.com/MerliMejia>

Full-Stack software developer with over 7+ years of professional experience in React.js, Node.js and TypeScript. Able to write high-quality, reusable, testable, and scalable code. For the Back-End, I specialize in Node.js but I also have experience in Java and C#. Comfortable with relational and non-relational databases, GraphQL, and ORMs like Prisma. I'm always learning new technologies and expanding my knowledge. That's why, regardless of the technology or project, I'm always able to adapt and provide the best results possible.

EXPERIENCE

Truelogic, Senior Full-Stack Developer — Jun 2023 - Present

I bring extensive expertise in developing robust and scalable web applications using cutting-edge technologies. With a focus on React, TypeScript, Next.js, Material UI, and Tailwind CSS, I consistently deliver high-quality solutions that exceed client expectations.

Tech Stack: Redux.js, Git, JavaScript, Node.js, React.js, Ruby on Rails, Chakra UI

Koombea, Frontend Developer — Feb 2022 - May 2023

I built React.js components, implement new UI features and fix different bugs. My leadership in this project, constant feedback to the team, eye for details and quick adaptation to the project's tech stack helped the company to launch a great platform on time that is now being used by thousands of users.

Tech Stack: Redux.js, Git, JavaScript, Node.js, React.js, Ruby on Rails, Chakra UI

Constant Contact, Software Engineer — Sep 2021 - Feb 2022

During my stay at this company, I wrote high-quality, reusable, pixel-perfect front-end components in React. Most of those components were made from scratch following an already made UI/UX design, but I also worked on already-written code.

I was in charge of researching and implementing a fix for a bug in one critical component in their custom UI library which ended up saving the team a lot of time in the development process of the newly enhanced platform.

Tech Stack: Redux.js, Git, JavaScript, Node.js, React.js

Self Employed, Professional Freelancer — Jan 2018 - Oct 2021

Worked on all kinds of projects for clients from all around the world. Some notable projects:

- I was in charge of designing, developing, and maintaining a finance mobile app and website from the ground up. My technical analysis and results helped this company to have a good online presence and get into the hands of hundreds of people.
- I designed and developed a Shipping Management platform in which the company can manage all the shipping of packages between their different branch offices. They can also get reports about their income and have better management overall in the shipping department.

Tech Stack: Redux.js, Git, Java, TypeScript, Flutter, PostgreSQL, JavaScript, Node.js, React.js, MongoDB

Harding Media, Full-stack Developer — Jan 2017 - Oct 2018

In this startup, I was completely in charge of the design and development of a web-based platform for ordering food with auth using email, Google and Facebook, PayPal API, and a real-time notification system. I provided the design of the whole backend structure used in both the web and mobile app which helped the mobile developers focus on the frontend work and accelerate the overall development time which led to a faster release.

Tech Stack: React.js, Node.js, Redux.js, Git, Firebase, MaterialUI and bootstrap.

SKILLS

Programming Languages: Advanced: JavaScript, TypeScript; Intermediate: Java, Dart, C#; Basic: Python, C++.

Frameworks Tools: Advanced: React.js, Node.js, Express, Next.js, Redwood.js, Socket.io, Prisma, GraphQL, Jest, Mocha, Cypress, Tailwind; Intermediate: Angular.js, Vue.js, Svelte.js; Basic: Nest.js.

Data Base: Advanced: MongoDB, Firebase, MySQL, PostgreSQL.

Tools: VSCode, IntelliJ, Git, Jira.

Agile: Scrum.

Languages: Advance: English; Native: Spanish.

EDUCATION

Universidad Dominicana O&M – La Romana, Dominican Republic. *Bachelor's degree in Systems Engineering, Nov 2018.*
